# Construction Scenario for Super-KEKB Main Ring

February 17, 2004

R. Sugahara

Vacuum System

V acadii by beetii								
Terms Fiscal year	2003	2004	2005	2006	2007			
Optics	Design							
Vacuum system								
Modification of cooling system	Design <b>←</b>		<del></del>	Modification	<b></b>			
LER ducts for outer ring	Design	Production	Receive, bake and hold		Installation			
LER ducts for inner ring in Nikko and Oho area	Desig	n ( mask design is included)	Production	Receive, bake and hold	✓ Installation →			
HER ducts for outer ring	Design <b>←</b>	Production	Receive, bake and hold		Installation			
HER ducts for inner ring in Nikko and Oho area	Desig	n ( mask design is included)	Production	Receive, bake and hold	Installation -			
Ducts for crab cavities			Production					
Movable masks	←Test HOM	l absorber	←Design	Production	Receive, bake and install			
Beam abort chambers			←Design	Production	Installation >			
Ducts for septum magnets			eDesign	Production	Installation			
Ducts for Fuji beam crossing area		Interference with beam cross mag. is examined	←Design	Production	Receive, bake and install			
Ducts for Tsukuba straight section		Interference with local corr mag. Is examined	←Design	Production	Receive, bake and install			
Ducts for IR		Solve HOM and> Bellows problem	←Design	Production	Receive, bake and install			
Bellows	Test <b>←</b>	Test for small cross section	Production	Production	Installation			
Gate valves and beam stoppers			Inform quantity after design of bellows	Production	✓ Installation			
NEG pumps	Inform quantity	Purchase						
BPMs		<b>«</b>	Should be supplied	>				

# Magnet System

Terms Fiscal year	2003	2004	2005	2006	2007
Magnet system  Product. of 6 p.s. + modifi- cation of 2 p.s. for crab cavity installation in	Design >	Production	Installation >		
Nikko Magnet production HER-Qscc (19+1) at Nikko LER-Qrf (2) at Oho StV, BC-mag (~458+4) Sextupole-mag. (48+1)			Design→	Production	
Work on magnets for ante-ch	·			Product. of Wig-mag spacers	Removing, opening, and closing magnets
Remove upper halves of V Replacement and alignmen Removal of Wig-mag. (76)	nt of vertical St-mag. (~450) in Oho	s, and put them back in Nikl	(0 (0		
Adjustment of coil suppor Replacement of 19 HER-Qrf	with Qscc-mag. in Nikko				$\leftarrow$
Replacement of 7 LER-Q wit Replacement of 48 Sx-mag.	with stronger ones				$\longleftrightarrow$
Rearrangement of magnet po  Reversal of power supply (p		ching			<del> </del>
Reversal of QCS polarity for	r energy switching				

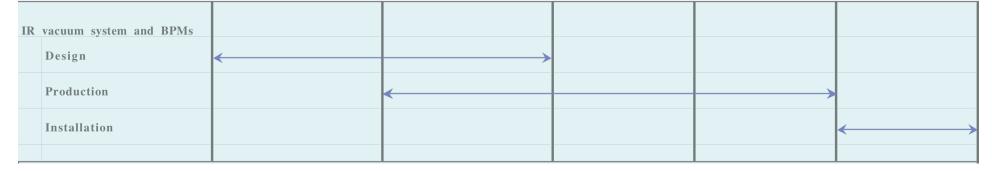

# RF System

Terms Fiscal year	2003	2004	2005	2006	2007
RF system  Production of klystrons		<b>~</b>		14 klystrons r crab cav. in Nikko)	<b>———</b>
Production of power supplies	s (p.s.)	Product. of a p.s. (for	Nikko crab cav.)	Product.	of 6 p.s.
High Power / Low Level syst	tem	Product. of 2 sets (for	Nikko crab cav.)	<del>&lt;</del>	of 14 sets
Cooling system		Product. of prototype	e and beam test	Preparation of parts	Product. and install.
Modification of ARES-AC for Superconducting Cavities (SC		<b>*</b>		<del>&lt;</del>	of 20 cavities  Replacement of beam pipes
R&D  ARES-HOM  ARES plating  SCC-HOM  Treatment of coupler sur	rface	•		<b>\</b>	
Control / feedback					

### **BPM System**

Terms \ Fiscal year	2003	2004	2005	2006	2007
Beam monitoring system BPM		<b>*</b>	Production	<b></b>	Installation >
SR monitors			Produ	iction	Installation >
Bunch feedback system			Produ	nction	Installation >
DCCT				Production	Installation >
PIN photo-diode beam loss	monitors			Production	Installation >

BPM					
SR monitors					
Bunch feedback					

#### IR Vacuum

		T	R Magi	nets		
	Terms \ Fiscal year	2003	2004	2005	2006	2007
IR-	·QCS					
	Design	<del></del>	<b></b>			
	R&D for QCS and corrector	coils	<del>-</del>	<b></b>		
	Purchase of additional sensor	rs and controllers		<del>-</del>	<b></b>	
	Preparation for magnetic fie	ld measurement		<del>-</del>	<b></b>	
	Improvement of cryogenic t	est facility		<del></del>	<b></b>	
	Magnet production				$\longleftrightarrow$	
	Additional piping for cryogo	enic system			$\longleftrightarrow$	
	Modification of cryogenic s	ystem				$\longleftrightarrow$
	Magnet replacement and test	operation				$\longleftrightarrow$
	Magnet field measurement a	fter installation				$\longleftrightarrow$
IR	special Q-magnets					
	Design	<del>&lt;</del>	<b></b>			
	Production of power supplies		<del>-</del>	<b></b>		
	Production of magnets			<del>-</del>	<b>—</b>	
	Preparation for magnetic field measurement		<b>«</b>	<b></b>		
	Magnetic field measurement				$\longleftrightarrow$	
	Magnet replacement					<del>&lt;</del>

## Utilities

Terms Fiscal year	2003	2004	2005	2006	2007
Utilities					
Modification of cooling systematics (	em for vacuum system pumps, cooling towers, coole	rs, etc.)	Modification	of 8 stations	
Piping in the tunnel					Addition and modification
Utilities for RF system					
Expansion of D4, D7, D8	and D10 buildings		<del></del>	<b>\</b>	
Modif. of cooling sys.	( for cavities, klystron collec	etors, bodies, dummy loads)	<del>-</del>	<b>\</b>	
Modification of electric 1	power stations (transformers,	filters, etc.)	<del>-</del>	<b>\</b>	
1GeV damping ring and BT	(LTD, DTL)				
Building, tunnel			<del></del>	<b>\</b>	
Electric power station (al	bout 1MW)		<del>-</del>	<del></del>	
Cooling system, Air con-	ditioner, etc.		<del>-</del>	<b>———</b>	
Maintenance of old utilities					
Roof of electric power bu	ildings		<del></del>		<b></b>
Cooling system (cooling t	ower fans, pumps, controller	rs)	<del>&lt;</del>	<b>\rightarrow</b>	
Coolers			<del></del>	<b></b>	

#### Year 2008 - 2014

Magnet and vacuum system Reversal of magnet polarity for energy switching Reversal of QCS polarity for energy switching Replacement of 6 LER-Q with LER-Qrf at Oho Replacement of beam ducts with Large cross section ones in LER at Oho  Product. of 18 klystrons Product. of 18 klystrons Product. of 16 sets of High Power / Low Level Modification of cooling system Surface facility for crab cav. at Tsukuba Addition of ARES at Oho Addition of ARES at Oho Addition of ARES at Oho Addition of 4 SCC at Nikko Replacement of couplers Product. of spares of dampers, etc.									
Reversal of magnet polarity for energy switching Reversal of QCS polarity for energy switching Replacement of 6 LER-Q with LER-Qrf at Oho Replacement of beam ducts with large cross section ones in LER at Oho  RF system  Product. of 18 klystrons Product. of 8 power supplies Product. of 16 sets of High Power / Low Level Modification of cooling system  Surface facility for crab cav. at Tsukuba Modification of ARES-AC for 20 LER cav. at Fuji Addition of ARES at Oho Addition of ARES at Oho Replacement of couplers  Product. of Install. of six ARES Install. of Install. o		↓ Terms Fiscal year →	2008	2009	2010	2011	2012	2013	2014

Addition of ARES at Oho  Addition of 4 SCC at  Nikko  Replacement of couplers  Addition of ARES at Oho  To ARES  Six ARES  Four ARES  Iknstall.									
Replacement of couplers		Addition of ARES at Oho	4	<b>&gt;</b>	Install. of six ARES				
						<b>\</b>	Iknstall.		
Product. of spares of dampers, etc.		Replacement of couplers		<b>←</b>					<b></b>
		Product. of spares of dampe	rs, etc.	<b>←</b>					<b></b>

#### Is it realistic

to replace all the vacuum chambers in 14 months? (July 2007 - August 2008)

Available days are about <u>290 days</u>. (Saturday, Sunday and holidays are excluded)

```
Remove upper halves of about 1,500 magnets 1,500 / (2*8) = 94 days Remove about 2,000 beam pipes 2,000 / (2*15) = 67 days Install about 2,000 new beam pipes 2,000 / (2*10) = 100 days Re-install upper halves of about 1,500 magnets 1,500 / (2*6) = 125 days
```

\_\_\_\_\_

Total 386 days

But as each job can overlap in some part, necessary time will be about <u>260 days</u>.

# The answer will be YES! But the time schedule is tight.
